# Program WCopypFind

The aim of the present investigation was to evaluate the effect of an extract from Corydalis yanhusuo W.T., a Chinese herbal medicine, on ischemia/reperfusion (I/R) injury and to determine the mechanism(s) involved. In rats, the left anterior descending (LAD) coronary artery was occluded for 30 min and then reperfused for 6 h. 0.5% carboxymethyl cellulose sodium was used as a vehicle (I/R control group) and Corydalis yanhusuo rhizoma extract (I/R + CY 200, 100 mg/kg groups) were given. Infarct size and hemodynamic parameters were measured. Apoptosis was detected quantitatively by the terminal transferase dUTP nick end-labeling (TUNEL) method and confirmed by DNA laddering on agarose gel. The expression of anti-apoptotic Bcl-2 and pro-apoptotic Bax proteins was visualized by western blot analysis. In contrast to the I/R control group, administration with CY 200 mg/kg resulted in a significant reduction in the infarct size and an improvement in heart function as evidenced by higher LVSP and +dp/dmax. TUNEL-positive cells in the ischemic myocardium were also significantly reduced in the I/R + CY 200, 100 mg/kg groups, consistent with little DNA laddering in these two groups. Furthermore, greater Bcl-2 and attenuated Bax expression was found in the CY treated rats. These results suggest that the protective effect of Corydalis yanhusuo on myocardial I/R injury is closely associated with the inhibition of myocardial apoptosis through modulation of the Bcl-2 family.

Apoptosis is a common pathological feature in acute myocardial infarction (AMI). The infarct size is an important determinant of the prognosis of AMI. In recent years, Chinese medicinal herbs and their extracts have received great attention in prevention of AMI. The aim of this investigation was to evaluate the anti-ischemic effect of total flavones from Elsholtzia blanda (Benth.) Benth. (TFEB), a traditional Chinese medicine and to make clear the mechanism involved in it. Myocardial infarction was induced by coronary occlusion in rats. Apoptosis was measured quantitatively by the terminal transferase UTP nick end-labeling (TUNEL) method and confirmed by DNA laddering on agarose gel. The expression of anti-apoptotic protein, Bcl-2 and pro-apoptotic protein, Bax was visualized by Western blot analysis. TFEB significantly reduced infarct size and TUNEL-positive rate confirmed by disappearance of DNA laddering. Greater Bcl-2 and attenuated Bax expression was found in TFEB treating rats. These results suggest that TFEB reduce infarct size during AMI by inhibiting myocardial apoptosis through modulation of Bcl-2 family.

The screenshot shows a Mozilla Firefox browser window with the title "Detail of Matched Document - Mozilla Firefox". The address bar contains the URL <http://blast.vrs.vrs.edu/tblast/search/detail?db=MEDLINE&docid=16276703&queryid=4363483>. The page content is titled "A Matched Document in MEDLINE:" and describes a study on suicide attempts in high school students. It includes sections for Title, PMID, Abstract, Authors, Journal, Type, ISSN, Year, Month, Affiliation, Published, and Link.

**Title:** Suicidal or suicidal behavior in a high school student population: a cross-sectional study.  
**PMID:** 16276703  
**Abstract:** AIM To examine high school students' suicidal behavior and to identify predictors of suicide attempt among adolescents in Timiș County, Romania. We hypothesized that suicide attempt is associated with other health-risk behaviors. METHODS In this cross-sectional study we included 2000 high school students in grades 9 to 12. The students were asked to complete an anonymous structured questionnaire during a normal class. We examined the relationship between having attempted suicide and engaging in other health-risk or problem behaviors. RESULTS During the previous 12 months, 15.4% of the students had had suicidal ideation, 7.5% had made a suicide plan and 6.1% reported that they had attempted suicide. Based on logistic regression multivariate analysis, attempted suicide was associated with being male or homosexual (odds every day for two or more consecutive weeks) ( $OR = 4.74$ , 95% CI: 3.09-7.31), being forced to have sexual intercourse ( $OR = 3.13$ , 95% CI: 1.83-5.50), being physically aggressed by his or her father ( $OR = 4.20$ , 95% CI: 1.86-8.34), performing poorly at school ( $OR = 4.22$ , 95% CI: 1.83-8.74), having an impaired relationship with parents ( $OR = 2.45$ , 95% CI: 1.17-5.12), not eating for 24 hours or more to lose weight or to avoid gaining weight during the past 30 days ( $OR = 2.23$ , 95% CI: 1.40-3.53), being female ( $OR = 1.91$ , 95% CI: 1.26-2.93) and carrying a weapon ( $OR = 2.44$ , 95% CI: 1.53-3.90). CONCLUSION This study suggests that suicide attempts are associated with other risk behaviors. These behaviors may help to evaluate suicide risk and should be considered when establishing preventive programs.

# Mrežna usluga CrossCheck

The screenshot shows a Mozilla Firefox window displaying the iThenticate similarity report for a document titled "CMJ-3117.doc". The report indicates a similarity index of 56%. The document content is about hydatid disease, mentioning its occurrence anywhere in the body and imaging features. The report also notes that no literature was found on the location of hydatid cysts inside pulmonary arteries. The right side of the interface lists four sources with their respective similarity percentages and URLs.

Rank	Similarity (%)	Source Description
1	29%	402 words - Internet from May 27, 2009 <a href="http://ejcts.ctsnetjournals.org">ejcts.ctsnetjournals.org</a>

Citing of original paper(s)	YES	-	

**Conclusion**  
Manuscript has identical portions of text in: Introduction and Materials and Methods.

**Manuscripts has characteristics of (delete if not needed):**

- follow-up investigation

**Corrections needed**  
Change the similar text in Introduction (1 st paragraph)

**Recommendation for peer review and publishing:** YES

- Primjer isključenog rada - nastavka istraživanja

#### Analysis report

Section	Similarity	Text Similarity Rate (TSR)	Comment
Full-text	YES	<b>98 %</b>	Liang Q, Li ZY, Zhou Y, Liu QL, Ou WT, Huang ZG. Construction of a recombinant eukaryotic expression vector containing PHD3 gene and its expression in HepG2 cells. J Exp Clin Cancer Res. 2012 Aug 17;31(1):64. [Epub ahead of print]
Citing of original paper(s)	NO		

#### Conclusion

Manuscript is identical to the one sent to J Exp Clin Cancer Res.  
One author is added in the article submitted in the Croatian Medical Journal, which raises serious doubts about authorship in the article.

Manuscripts has characteristics of (delete if not needed):

- duplicate publication

Recommendation for peer review and publishing: NO

- Primjer dvostruke publikacije
- 98% podudarnog teksta

**Analysis report**

Section	Similarity	Text Similarity Rate (TSR)	Text	Comment
Full-text	YES	85 %	The text was derived from: Mishra SK, Mohapatra PK, Bhattacharya K, Gupta T, Agarwal JP. Prevalence of psychiatric disorder in asymptomatic or minimally symptomatic cancer patients on treatment. <i>J Cancer Res Ther.</i> 2006;3:136-9. Available at: <a href="http://www.cancerjournal.net/article.asp?issn=0973-1482;year=2006;volume=2;issue=3;spage=136&amp;page=139;aulast=Mishra">http://www.cancerjournal.net/article.asp?issn=0973-1482;year=2006;volume=2;issue=3;spage=136&amp;page=139;aulast=Mishra</a>	
Abstract	YES	80 %		
Introduction	YES	92 %	-	
Materials and Methods	YES	89 %	The sample is identical to the sample in previously published article (n=47), although Mousavi et al claim that there were initially 240 patients whereas in Mishra et al (2006) there were 200 patients.	
Results	YES	91 %	The results are almost identical to that in previously published article. The frequencies, the relative frequencies, the P-values are identical to that in previously published article. Table 1 is not presented. Table 2 is different from the table 2 in previously published article, but the results are the same.	
Discussion	YES	79 %		
Citing of original paper(s)	NO		The original article is not cited. The list of references is almost the same (14 out of 17).	
Author(s) in Déjà vu database	NO			

**Conclusion**

Manuscript has identical portions of text in all sections, the whole text and the results were derived from previously published article, including the title of the manuscript.

The authors have taken the whole article and tried to present it as theirs, which is considered major (blatant) plagiarism.

The institution should be contacted as the manuscripts could be sent to another journal and even be published.

**Manuscript has characteristics of:**

- major plagiarism

**Recommendation for peer review and publishing:** NO

- Primjer napadnog plagiranja
- 85% podudarnog teksta

# Zaključak
